Infoshield the Awareness Solution

Infoshield an integrated E-learning Management System that educates users about the growing risks of information security and provides them with security countermeasures to respond accordingly.

Infoshield is a comprehensive solution designed and developed to fulfill all requirements for cybersecurity awareness and training. It consists of a Learning Management System (LMS) developed by Innovative Solutions in response to the ever-increasing number and severity of attacks targeting and breaches caused by employees.

The solution aims at structurally spreading essential knowledge about cybersecurity and associated risks in addition to providing extensive information and proper course of actions when targeted by cyber threats.

Infoshield Objectives

- **Promoting security awareness** and knowledge within an organization efficiently.
- **Educating employees** about expected behavior and responsibilities for safeguarding information.
- **Increasing effectiveness of security awareness** by providing interactive content.
- **Targeting different levels within an organization** with a variety of security topics.
- **Minimizing human errors** by disseminating best security practices.
- **Strengthening the human link** in the information security chain at any organization.
- **Providing up-to-date security awareness modules** that tackle most security risks.

Infoshield Features and Benefits

Bilingual Support

full support for Arabic and English languages for user interface and security content.

User Integration

It's easy to integrate Infoshield with active directory to synchronize user account in addition to manual integration.

Deployment

Infoshield can be easily deployed as-a-service or on premise to meet any particular legal or regulatory requirements.

Branding

co-branding or sole branding can be provided with organization corporate identity.

Tracking and Reporting

a wealth of reports and dashboards are available with detailed key performance indicators and maturity levels.

Customization

security content can be customized according to organization's needs.

Testing

quizzes are associated with modules to test the employees' knowledge.

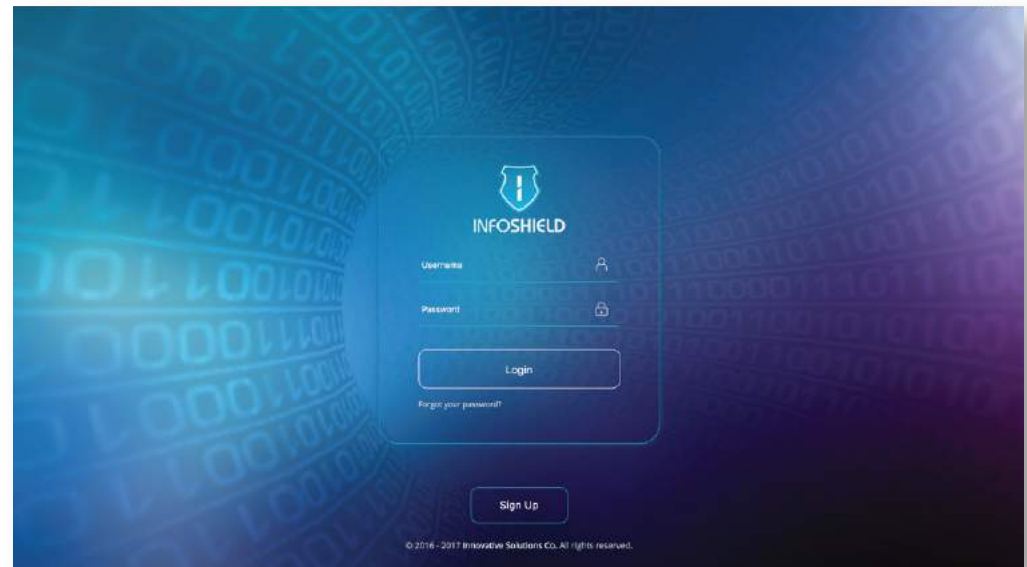

On Demand - Modules

topics can be customized or developed based on needs and business objectives.

Infoshield Awareness Modules

The modules are logically structured to present a variety of topics. Each module is fully animated and the content can be viewed sequentially. In addition to that, each module is associated with an illustrated video and a quiz. The modules are delivered through an integrated and interactive learning management system to assure delivering the learning process effectively

Infoshield Awareness Modules

Introduction to Information Security

This module provides users with an overview of information security, and defines the basic information security terminology. Also, it highlights the most significant threats to information security

Email Security

In this module, users will gain knowledge on spams and other threats that target emails, and security countermeasures to mitigate the associated risk. Users will be provided with highly advised tips to protect emails

Phishing

This in-depth phishing module educates users about the methodology of phishing and the different types and methods used in phishing. Also, it provides users with the best security practices to avoid getting hooked

Password Security

This module identifies the characteristics of weak and strong passwords. Also, users will learn how to create a strong and well-protected passwords in addition to some popular attacks against passwords

Social Engineering

This module promotes knowledge about Social engineering, and explains the common tactics used to deliver social engineering attacks. In addition, it provides best security practices to mitigate the associated risk

Workplace Security

This module defines workplace security and its levels. It classifies the potential breaches to workplace based on the assigned levels, and enumerates best practices to guard against loss from malicious attacks at work

Infoshield Awareness Modules

Data Protection

In this module, the focus is on how to protect data. Users will learn the fundamental requirements to ensure data protection, and get insight into some techniques to properly secure confidential data and handle it with care

Malware

In this module users will gain knowledge about the different forms of malware. They will get insight on different factors help that malware propagation. Also, users will learn security practices to minimize the risk of malware

Wi-Fi Security

This module educates users about the risks of public wi-fi and the precautions users should take in order to protect themselves. Also, users will be provided with the best practices to connect securely

Social Media

This module draws attention to the relationship between social media and user privacy. It also explains the reasons why attackers prefer social media to deliver cyber-attacks. Users will learn best practices for a secure social networking

Mobile Devices Security

This module covers the threats associated with mobile devices as they have the same functionality and complexity as a computer, but with higher risk of being mobile and easy to lose. Users will learn how to protect them properly

Cloud Computing

In this module, users will gain basic knowledge on cloud computing and understand its role in boosting data management efficiency. Also, users will recognize the risks comes with cloud computing and learn how to use it safely
