Your Business. Secured!

BAD RABBIT

Zero-day Attack, Zero Business Impact
continuous security monitoring & protection

While currently the world is focusing on how to prevent Bad Rabbit attack through common reactive approaches such as blocking IOC's and constantly searching for any latest indicators, the users of deep (i) Security Suite are rest assured that critical information and systems are already protected from such attacks. Thanks to the state-of-the-art Managed Endpoint Protection Service offered by Innovative Solutions (IS), zero day attacks and compromises of such nature are seamlessly prevented every time.

Our team of security consultants and analysts are constantly ensuring that all your endpoints are protected through advanced application whitelisting solution to prevent new malicious or unauthorized files from executing in your environment even if the credentials have already been stolen and attackers have gained access to the machine.

Looking closely at the attack analysis, it can be observed that Bad Rabbit requires the victim to actively execute the malicious file after downloading. The attack cannot proceed until the malicious file is executed in some way or the other. With **deep (i) - Managed Endpoint Protection Service,** we ensure that strict policies are applied to forbid any unknown file to be executed that preventing the attack in initial stages.

Targeted attacks using Spear Phishing is becoming a common trend nowadays where attackers send a targeted email to a specific organization. Once the link or attachment in the email has been executed, the new malware start to harvest credentials or compromise a machine. With **deep (i) - Managed Endpoint Protection Service,** we ensure that even if accounts are compromised or attackers have access to a machine in your environment, they are unable to execute any malicious programs/files thus leading to effective prevention of potential security incidents.

IS also constantly monitors its client infrastructure through **deep (i) - Managed Monitoring Service** coupled with Threat Intelligence feeds that are consistently updated to ensure that all network traffic is matched with any latest Indicators of Compromise (IOC) and alarms are generated if any malicious actor is detected. Coupled with tight Infrastructure monitoring and Endpoint Protection through actionable intelligence, clients can now focus on their core business while being protected.
